Joshu Builder

Third-Party Data APIs
Crime, Geo, Business Intelligence, etc.
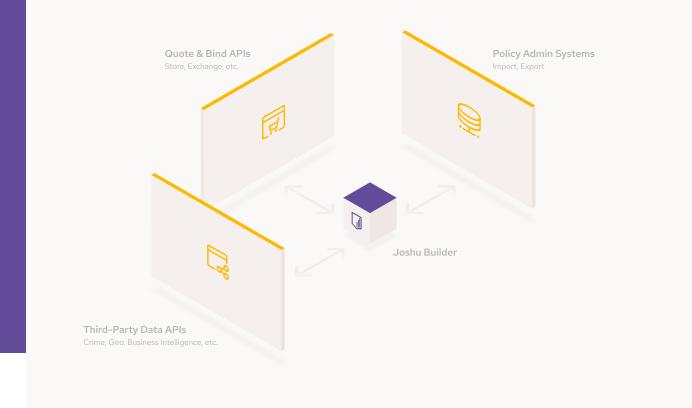

# Your link to external systems and data. You can manually export bordereaus, or we can develop API integrations as needed with a PAS or third-party data APIs.

## Product APIs are standard

All Joshu products are backed by a real-time API. Change your application questions or coverages, and the API is automatically updated. Every product comes with dynamically updated, developer-friendly documentation to make it easy to work with external partners like exchanges or in-house portals.

## Optional third-party data APIs

With Joshu, it's easier to integrate third-party data APIs to enrich rating or pre-fill application questions. With powerful data sources, insurers can get great data for underwriting with fewer application questions, and deliver a much simpler customer experience

## Policy Admin System integrations

Joshu isn't a PAS—we focus on product design and digital distribution. We can sell your products end-to-end without PAS integration. Still, some customers may require custom integrations, and we're happy to discuss these needs with you.

## Safe & secure

Security best-practices and awareness are embedded in the way we build products. Cloud architecture, libraries, code management, monitoring, and testing are all state-of-the-art and constantly updated.
